Test report 1 - 50

Notice the use of PUBLIC_URL in the tags above.

It will be replaced with the URL of the `public` folder during the build.

Only files inside the `public` folder can be referenced from the HTML.

Unlike "/favicon.ico" or "favicon.ico", "%PUBLIC_URL%/favicon.ico" will work correctly both with client-side routing and a non-root public URL.

Learn how to configure a non-root public URL by running `npm run build`. Report 2 fror 1 - 50
